2018 Annual Site-Wide Groundwater Monitoring Report

Dear Mr. Warner:

On behalf of United Technologies Corporation (UTC), AECOM Technical Services, Inc. (AECOM) is hereby submitting the attached 2018 Annual Site-Wide Groundwater Monitoring Report.

Please call if you have any questions (919.461.1194).

Sincerely,

Peter Hollatz
Project Manager

1. Introduction

United Technologies Corporation (UTC) is performing environmental remediation activities at the Carrier Thompson Road Facility (Site) in Syracuse, Onondaga County, New York (**Figure 1**). UTC retained AECOM Technical Services, Inc. (AECOM) to provide environmental engineering and investigation support services. Environmental work at the Site is being performed in accordance with the January 2006 Corrective Action Order on Consent (CO) negotiated with the New York State Department of Environmental Conservation (NYSDEC).

Groundwater at the Site has been sampled on a routine basis in accordance with the 2009 Site-Wide Monitoring Plan (SWMP) prepared by EnSafe, Inc. (EnSafe). At that time, the existing Site groundwater monitoring locations consisted of approximately 20 monitoring wells and 45 piezometers. Since 2009 a series of monitoring points have been installed as part of additional investigation activities and interim remedial measures. As a result, there are currently 95 monitoring wells and over 38 piezometers located across the Site (see **Figure 2**).

Groundwater sampling at the Site was conducted semi-annually from 1990 through 1999, and then on an annual basis from 2000 to 2017 (NYSDEC approved the delay of annual sampling in 2016 due to significant investigation activity being performed).

AECOM prepared and submitted a revised Annual Site-Wide Groundwater Monitoring Plan (SWGMP) in October 2017. It was approved by the NYSDEC on October 27, 2017. The Annual SWGMP (as revised in 2017) was developed considering the following remedial goals and criteria for groundwater presented in the CO:

- Groundwater monitoring must demonstrate compliance with all applicable state and federal water quality standards.
- If groundwater standards are not met, monitoring must demonstrate that natural attenuation continues to reduce the concentration of contaminants in the already contaminated areas; or that contaminant concentrations have stabilized and do not pose a significant threat to human health or the environment.
- Groundwater monitoring must continue to demonstrate that contaminants are not migrating off-Site and are not causing a threat to human health or the environment.

The Annual SWGMP includes inspection of wells, collection of water levels for use in determining groundwater flow, and collection and analyses of groundwater samples to evaluate groundwater quality.

The previous Site-wide groundwater monitoring event took place in November 2017. The findings were reported in the Annual Site-wide Groundwater Monitoring 2017 Report (AECOM March 2018). Groundwater monitoring and sampling was performed in October 2018 in accordance with the Annual SWGMP. This report presents the procedures and findings of the October 2018 sampling event.

2. Background

2.1 Facility Description

The Site is located in the northeast portion of Syracuse, New York, approximately one mile south of the New York State Thruway. The Site is bordered by New York State Route 298 to the north, Thompson Road to the west, Kinne Street to the east, and a baseball field and industrial area (Verizon) to the south. The Site is relatively flat with a slight downward slope to the north toward Sanders Creek. The Site consists of pavement, buildings, areas of lawn covering former slabs of demolished buildings, and general landscaping.

2.2 Site History

Prior to World War II, the property was utilized as farmland. Development of the Site as an industrial facility began around 1942. The facility was initially operated by General Electric and included manufacturing activities related to national defense. Subsequent Site operators included the Defense Corporation - a government-owned World War II manufacturing facility, and Syracuse University.

The Site was purchased in the 1950s by Carrier Corporation (Carrier). The Carrier facility produced a variety of products associated with heating, ventilation, and air conditioning industry. Carrier continues to operate the facility, although several of the large, original buildings have been demolished.

Subsurface investigations have been conducted at the Site since the late 1980's. During the course of these investigations, numerous groundwater monitoring wells and piezometers were installed. Some of the investigations found volatile organic compound (VOC) and/or polychlorinated biphenyl (PCB) impacts in groundwater. Interim remedial measures have been, and continue to be, employed to address identified impacts.

2.3 Geology and Hydrogeology

The Site consists of three primary hydrostratigraphic units as follows:

Upper Water-Bearing Zone

- Fill composed of silty clay with varying amounts of gravel, cobbles, brick, metal, and concrete. This unit ranges in thickness from 1 foot (ft) to 8 ft.
- Silty clay with silt and sand lenses ranging in thickness from 2 ft to 15 ft.

Confining Clay Unit

- Gray clay confining unit ranging in thickness from 7 ft to 13 ft.

Lower Water-Bearing Zone

- Clayey silt to silt ranging in thickness from 6 ft to 10 ft.
- Red brown fine to medium sand, ranging in thickness from 2 ft to 6 ft.
- Dense clay/silt unit, ranging in thickness from 4 ft to 12 ft.
- Red brown to green gray weathered shale.

The shallow monitoring wells and all piezometers at the Site are screened in the upper water-bearing zone and deep monitoring wells are screened in the lower water-bearing zone. Depth to water in the upper water-bearing zone ranges approximately 1 ft to 14 ft below ground surface (bgs). Depth to water in the lower water-bearing zone ranges from artesian conditions to approximately 8 ft bgs. The artesian conditions are present in two wells (MW-54D and TR3-GB-03) in the former Building TR-3 area. Overall, horizontal groundwater flow is to the north-northwest across the Site in the upper water-bearing zone and westerly in the lower water-bearing zone.

2.4 Existing Groundwater Monitoring Well Network

There are currently 95 monitoring wells and over 38 piezometers present at the Site. Ten of the 95 monitoring wells terminate in the lower water-bearing zone and the remainder are in the upper water-bearing zone. The piezometers all terminate in the upper water-bearing zone.

The monitoring points were installed to monitor groundwater conditions at various areas including:

- Former Solid Waste Management Units (SWMUs) 1, 2, 3, and 4, which were concrete and steel storage tanks located in the area between buildings TR-1 and TR-4, north of building TR-6.
- Former Building TR-1, located in the western portion of the Site.
- Former Building TR-2, located in the northwestern portion of the Site, north of former Building TR-1.
- Parking Lot R, located in the north central portion of the Site, a paved portion of former Building TR-3.
- Building TR-3 North Wall/Storm Water Treatment Plant (SWTP), located in the north central portion of the Site.
- Manhole MH3 located inside the SWTP.
- Former Administrative and Research (A&R) Building, located in the northeastern portion of the Site.
- Former Debris Pile, located in the southeastern portion of the Site.

For selection of water level monitoring and groundwater sampling points in the Annual SWGMP, the existing monitoring well/piezometer network was considered to consist of the following three subsets:

1. Perimeter Wells – consisting of monitoring wells located along the perimeter of the Site. These locations are monitored and sampled to assess groundwater conditions up-gradient, down-gradient, and side-gradient of the Site.
2. Area Specific Wells/Piezometers – consisting of monitoring points installed in AOCs, SWMUs, and other areas of investigation. These locations are monitored and sampled to assess groundwater conditions in the vicinity of known areas of contamination. These specific areas are:
 - Former Building TR-1
 - Former Building TR-3 and Parking Lot R
 - Existing SWTP
 - Former A&R Building
 - Former SWMUs 1 through 4
3. Miscellaneous Interior Wells/Piezometers – consisting of locations not included in items 1 and 2 above.

Not all monitoring wells and piezometers at the Site are monitored and/or sampled. Refer to **Table 1** for a summary of program wells. For the Annual SWGMP, in areas where the monitoring well and/or piezometer density is high, representative wells and/or piezometers have been selected for the monitoring and sampling program.

Monitoring wells and piezometers have been installed at the former landfill referred to as Area of Concern (AOC) G west of Thompson Road. However, this Annual SWGMP focuses on the Thompson Road Campus portion of the Site where on-going operations occur and does not include AOC G.

2.5 Emerging Contaminants

In a letter dated March 13, 2018, NYSDEC requested emerging contaminants (1,4-dioxane and per-and polyfluoroalkyl substances [PFAS]) groundwater sampling at the Site using NYSDEC guidance documents. AECOM prepared and submitted an Emerging Contaminants Groundwater Sampling Work Plan (Work Plan) and submitted it on September 25, 2018. The work plan provided rationale for the 10 wells selected to be sampled for emerging

contaminants (DP-MW-04, AR-MW-02, MW-10, MW-3S, MW-3D, MW-14, MW-14D, MW-17, MW-70, and MW-71). NYSDEC approved the Work Plan in a letter dated September 27, 2018.

3. Site-Wide Groundwater Monitoring Activities

3.1 Monitoring Point Inspections

A comprehensive inspection of the 133 monitoring wells and piezometers listed in **Table 2** was made for general exterior conditions. The 94 locations selected for groundwater level monitoring were also inspected for interior conditions. The inspections determined the condition of each monitoring point's exterior and interior (as appropriate), such as concrete pad, bolts, lid, curb box, riser, annular space, and J-plug. The findings of the monitoring point inspections are summarized on **Table 2**.

The following wells could not be located in the 2017 inspection or the 2018 inspection and are presumed to be paved or sodded over:

Monitoring Well/Piezometer	Status
AR-SB-04	Presumed sodded over. Part of monitoring program for water level measurements.
B001-08	Presumed paved over. Part of monitoring program for water level measurements.
B001-14	Presumed paved or sodded over. Well not part of the current monitoring program.
FDPZ02	Presumed sodded over. Well not part of the current monitoring program.
FDPZ04	Presumed sodded over. Well not part of the current monitoring program.
MW-11	Could not be located. Beneath temporary access road installed for the TR-3 North Wall sheet pile installation project. Well not part of the current monitoring program.
MW-20	Presumed paved over. Part of monitoring program for water level measurements.
MW-53	Could not be located. Well is the area of the TR-3 North Wall sheet pile installation. Well not part of the current monitoring program.
MW-59	Could not be located. Beneath temporary access road installed for the TR-3 North Wall sheet pile installation project. Well not part of the current monitoring program.
SSIPZ05	Could not be located, the other wells of this type in the vicinity are PVC stick-ups (with no steel protective casing). Part of monitoring program for water level measurements.

The following wells were identified as in need of maintenance in 2017 or 2018 and the maintenance was completed as noted:

Monitoring Well/Piezometer	Status
AR-SB-02	Converted to a flush-mount well and installed road box on November 9, 2018
B001-05	Road box sunken, creating trip hazard, replaced road box November 9, 2018
B001-06	Riser too high to fit j-plug inside box. Cut riser to facilitate j-plug installation on November 9, 2018
B001-13	Road box and casing are loose. Repaired November 9, 2018
MW-03D	Replaced lock November 9, 2018
MW-03S	Replaced lock November 9, 2018
MW-06	Missing J-plug and 4" Royer Cap. Repaired November 9, 2018

Monitoring Well/Piezometer	Status
MW-09	Replaced lock November 9, 2018
MW-14	Raised concrete pad. Repaired October 17, 2018
MW-14D	Raised concrete pad. Repaired October 17, 2018
MW-19	Missing bolts. Repaired October 23, 2018
MW-18	Bolts stripped. Repaired October 23, 2018
MW-41D	Two broken ears. Repaired November 19, 2018
MW-47	One bolt missing. Repaired October 23, 2018
MW-54D	Concrete cracked. Repaired November 9, 2018
MW-55	Road box and concrete dislodged, and riser bent due to proximity to sheet pile wall at TR-3 North Wall. Repaired November 9, 2018
MW-56	Road box loose, ground has settled in vicinity. Repaired November 9, 2018
MW-57	Concrete cracked, riser slightly leaning. Repaired November 9, 2018
MW-62	Bolts stripped. Repaired October 23, 2018
SSIPZ04	Replaced 1-inch j-plug November 9, 2018
TR3-GB-03	Lid missing, needs new road box. Repaired November 9, 2018

3.2 Water Level Monitoring

On October 11 and 12, 2018, water levels were measured from 90 of the 94 monitoring wells and piezometers specified in the Annual SWGMP. The following points specified in the Annual SWGMP could not be accessed: AR-SB-04 (unable to locate), B001-08 (paved over), MW-20 (paved over), and SSIPZ05 (unable to locate). Water level measurements were performed using an electronic oil/water interface probe. The measurements included determination of the thickness of light non-aqueous phase liquid (LNAPL), where present. Both the lower and upper water-bearing zones were monitored. Water level measurement for monitoring wells and piezometers are presented in **Table 2**.

Water level measurements were used to determine direction of groundwater flow across the Site through the generation of potentiometric contour maps of both the upper and lower water-bearing zones. In addition, some areas require closer evaluation for the purposes described below:

- Monitoring points have been included in the former A&R Building area to evaluate the apparent groundwater mounding condition observed during the A&R area investigation in 2016.
- Monitoring points have been included in the former Buildings TR-1 and TR-3 area to evaluate LNAPL thickness and potential migration.
- Monitoring points have been included in the former Building TR-3 area to evaluate the horizontal well capture zone.

The groundwater elevation and LNAPL thickness measurements are presented in **Table 2**. Where LNAPL is present, the groundwater elevations shown on **Table 2** have been corrected to account for the LNAPL. The groundwater elevation in October 2018 was, on average, 0.97 ft lower than the previous monitoring event in November 2017.

3.2.1 Upper Water-Bearing Zone Groundwater Flow

Groundwater contours for the upper water-bearing zone are presented in **Figure 3**. Generally, flow across the Site is north-northwest across the majority of the Site. Exceptions are as follows:

- A groundwater mound beneath the former A&R building – Water elevations in monitoring wells AR-MW-02 and AR-MW-03 remain higher than nearby wells. This condition is attributed to a higher rate of recharge in the vicinity of the wells where impervious surfaces (concrete slabs, former building foundations and associate infrastructure) are not present. In 2018 the height of the mound is lower than in 2017 as would be expected when overall water elevations are lower. The influence of this mound is likely to be limited to areas in its immediate vicinity with minimal impact on the overall shallow flow system at the Site.
- Water table mound beneath former TR-1 building – A groundwater mound beneath the former TR-1 building and presence of LNAPL complicates groundwater flow interpretation in this area. Water elevations in monitoring wells DCDZ02, MW-26, and MW-29 are higher than other nearby wells. As with the mound near the A&R Building, this mound appears indicative of an area of enhanced recharge, coupled with fine grained soil resulting in minimal flux away from the mound. LNAPL was encountered in 7 monitoring wells in this area. Overall, the water levels in this area reflect groundwater flow to the north although at MW-71 localized flow is to the southwest.
- Complex water table interpretation South of the SWTP - Several areas have shown isolated water table mounds and depressions. These conditions are likely transient and reflect recharge in areas lacking impervious surfaces coupled with fine grained soil the results in a minimal flux away from mounded areas. In this area drainage near storm sewer backfill may contribute to lower water levels recorded at wells B100104 and B100105. This complex condition was not observed in 2017 when fewer wells were used to characterize groundwater flow.
- Flow intercepted by the horizontal well and sheet pile wall at former Building TR-3 – Monitoring points in and around former Building TR-3 show the capture zone formed by the combination of the horizontal well and sheet pile wall. A detail of this area is provided in **Figure 4**. The horizontal well, which typically discharges approximately 3 gallons per minute (when the pump is actively on – the pump cycles on/off based on groundwater level floats), is capturing groundwater as designed. This is evidenced by the absence of a mounding condition and the presence of water table depression behind the sheet-pile wall.

3.2.2 Lower Water-Bearing Zone Groundwater Flow

Groundwater contours for the lower water-bearing zone are presented in **Figure 5**. Flow in the lower water-bearing zone is generally in a westerly direction.

3.2.3 LNAPL Thickness Results

Monitoring in the former Building TR-1 and TR-3 areas included evaluating LNAPL thickness and potential migration. As shown below, LNAPL was observed at the same wells in 2018 as in 2017 with only minor changes in thickness (with the exception of a large decrease in thickness in SSIPZ04). LNAPL was not observed at any new locations indicating that the LNAPL has not migrated (SSIPZ02 has had historical detections of LNAPL).

Monitoring Point	2017 LNAPL Thickness (Ft)	2018 LNAPL Thickness (Ft)
DCDPZ01	0.62	0.75
DCDPZ04	0.22	0.18
MW-25	2.90	2.01
MW-31	0.01	0.24
MW-33	Sheen	0.07
MW-46	0.01	0.20
PLR001	0.27	.01
SSIPZ02	Not detected	Sheen
SSIPZ04	3.02	0.02

3.3 Groundwater Sampling

Groundwater samples were collected from 33 monitoring wells (**Table 1**) using USEPA/NYSDEC low-flow sampling procedure. No piezometers were sampled. All wells were sampled using a peristaltic pump, with dedicated tubing used at each well. In-line filters (for PCB samples) were also dedicated and disposed of after sampling. Water quality parameters of pH, conductivity, temperature, dissolved oxygen (DO), oxygen reduction potential (ORP), and turbidity were periodically recorded during well purging.

Samples were collected into laboratory supplied containers and delivered to Eurofins Spectrum Analytical Inc. (Eurofins), a New York State Environmental Laboratory Approval Program (ELAP) certified laboratory located in Agawam, MA. The samples were delivered under Chain of Custody protocol. Thirty-two locations were analyzed for VOCs, five locations (MW-19, MW-23, MW-26, MW-38, and MW-44) were analyzed for PCBs (filtered and unfiltered samples), and ten locations were analyzed for emerging contaminants (1,4-dioxane and PFAS). Samples scheduled for PCB analyses were filtered in the field. Copies of the Field Purge Logs are included in **Appendix A**.

3.3.1 Disposition of Investigation-Derived Waste

Groundwater generated during well purging and sampling activities was managed as investigation-derived waste (IDW) and was transferred to the on-Site SWTP for treatment. The interface probe was decontaminated by spraying with Alconox and potable water solution, wiping with paper towels, followed by a potable water rinse (wiping the probe with clean paper towels prevented the accumulation of soapy water which cannot be treated at the SWTP).

Solid IDW (e.g., tubing, paper towels, and personal protective equipment) was disposed of in the solid waste dumpster at the SWTP.

4. Laboratory Analytical Results

Samples from 32 locations were submitted to Eurofins for analysis of VOCs with five locations also analyzed for PCBs (filtered and unfiltered). Ten locations were analyzed for emerging contaminants (1,4-dioxane and PFAS). Three duplicate samples and one matrix spike/matrix spike duplicate (MS/MSD) pair were submitted for VOC analysis for quality assurance/quality control (QA/QC) purposes. Similarly, one duplicate sample and one MS/MSD pair were submitted for analysis of PCBs. Additionally, two duplicates, one MS/MSD, one field blank, and one equipment blank were submitted for analysis of 1,4-dioxane and PFAS.

Upon receipt of the analytical results, data validation was performed by an AECOM chemist following NYSDEC DER-10 and USEPA Region II data validation procedures. The data validation results are presented in a Data Usability Summary Report (DUSR) provided in **Appendix B**.

The DUSR presents deviations from the relevant QC requirements and the associated qualifications to the sample data warranted by these deviations. QC items discussed in detail in the DUSR include surrogate sample recoveries, matrix spike recoveries, duplicate sample analyses, instrument calibration, and performance and method and field blank sample analyses. The report also presents copies of the laboratory reporting forms with hand written qualifications made by the data validator. The data presented in the summary tables included in this report reflect these qualifications. Overall, validation showed that the data were of adequate quality for use in a quantitative evaluation of groundwater quality in accordance with the requirements of the Annual SWGWMP.

Validated laboratory analytical results are presented in **Table 3, Figure 6, and Figure 7**. The groundwater analytical results are compared to the NYS Ambient Water Quality Standards (AWQS) and Guidance Values in Technical & Operational Guidance Series (TOGS) Version 1.1.1, June 1998, with June 2004 Addendum. A statistical summary of the results is presented as **Table 4**. Statistics include the number of detections, frequency of detections, range of detections (minimum, maximum, average), number of exceedances, and the location of the maximum value. The following presents a summary of the results:

- PCBs were not detected in filtered or unfiltered samples from the five wells sampled (MW-19, MW-23, MW-26, MW-38, and MW-44).
- VOCs were detected in 19 of the 32 samples.
- Sixteen samples had one or more VOCs present at a concentration higher than its respective TOGS guidance value.
- The most commonly detected VOC group was chlorinated VOCs, which were detected at concentrations above groundwater criteria in 16 samples. The chlorinated VOCs detected at concentrations exceeding criteria include trichloroethene (TCE), tetrachloroethene (PCE) and their breakdown products chloroethane, cis-1,2-dichloroethene (cis-1,2-DCE), 1,1-dichlorethane (1,1-DCA), 1,1-dichlorethene (1,1-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), 1,1,1-trichloroethane (1,1,1-TCA), and vinyl chloride (VC).
 - Concentrations of chlorinated VOCs exceeding groundwater criteria ranged from 5.6 micrograms per liter ($\mu\text{g}/\text{L}$) PCE to 94,500 $\mu\text{g}/\text{L}$ TCE.
 - TCE concentrations were highest at locations MW-18, MW-69, and TR3-PW-01 where concentrations ranged from 2,480 to 94,500 $\mu\text{g}/\text{L}$. The highest concentration occurred at TR3-PW-01. Concentrations ranged from below detection limits to 168 $\mu\text{g}/\text{L}$ at the other wells.
 - Cis-1,2-DCE concentrations were highest at locations MW-18, MW-23, and TR3-PW-01. Concentrations ranged from 3,250 to 14,000 $\mu\text{g}/\text{L}$. The highest concentration occurred at TR3-PW-01. Concentrations ranged from below detection limits to 863 $\mu\text{g}/\text{L}$ at the other wells.
 - The highest concentrations of 1,1-DCE, trans-1,2-DCE, and VC occurred in MW-18 at detected concentrations of 62.2, 54.7, and 1,830 $\mu\text{g}/\text{L}$, respectively.
 - The highest concentrations of chloroethane, 1,1,1-TCA, and 1,1-DCA occurred in well MW-23 at detected concentrations of 11.8, 79.9, and 228 $\mu\text{g}/\text{L}$, respectively.

- Water quality measurements recorded at the time of sample collection (see purge logs in **Appendix A**) indicate low DO and ORP in some of the wells with the highest VOC concentrations (e.g., MW-18, MW-23, and TR3-PW-01) suggesting that groundwater conditions are favorable for anaerobic degradation (reductive dechlorination). The presence of TCE breakdown products (e.g. cis-1,2-DCE and VC) further suggests that reductive dechlorination is ongoing.
- The only non-chlorinated VOCs detected at concentrations above the groundwater criteria were benzene, ethylbenzene, toluene, and xylene, which were only detected in well MW-23.
- Emerging Contaminants
 - The Environmental Protection Agency (EPA) health advisory drinking water level is 0.070 µg/L for the combined concentrations of perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). There are no potable wells on the Site and based on a January 2019 EDR Radius Map™ Report (see **Appendix C**) search there are no potable wells within 1-mile of the Site.
 - One or more PFAS were detected in five of the ten wells sampled. Concentrations were below the EPA drinking water health advisory levels for PFOS and PFOA. AR-MW-02 had the highest concentrations detected at 33 nanograms per liter (ng/L) and 24 ng/L for PFOS and PFOA, respectively.
 - 1,4-dioxane was detected in four of the ten wells sampled at concentrations ranging from 1.63 µg/L to 9.53 µg/L. The highest concentration occurred at MW-71 which was consistent with historical results.

5. Evaluation of Findings

Evaluation of the data is discussed in the following sections by area. Comparisons are made to historical data that is attached for reference in **Appendix D**.

5.1 Perimeter Well Network

Table 1 lists the twelve monitoring wells located along the Site perimeter that were sampled to evaluate whether contaminants are migrating on- or off-Site. One of the twelve perimeter wells (MW-71) contained compounds at concentrations above the groundwater criteria.

Monitoring well MW-71 is located on the western edge of the Site and is adjacent to the former Building TR-1 area. Compounds exceeding criteria in MW-71 were TCE (123 µg/L), cis-1,2-DCE (73.9 µg/L) and VC (8.9 µg/L). The groundwater criteria for cis-1,2,-DCE and VC are 5 µg/L and 2 µg/L, respectively.

5.2 Former A&R Building Area

Monitoring wells AR-MW-02 and AR-MW-06 in the former A&R Building area were sampled:

- AR-MW-02 is located within the groundwater mound at the former A&R building. No CVOCs were detected in this well in 2018. This is consistent with results from 2016 and 2017.
- AR-MW-06 is located upgradient of the groundwater mound near the former A&R building. This well has historically had concentrations of cis-1,2-DCE, toluene, TCE, and VC at concentrations exceeding groundwater criteria in 2016. However, in 2018 only cis-1,2-DCE and TCE was present at a concentration exceeding the groundwater criteria. In 2018, concentrations were very similar to those in 2017, although the concentration of TCE rose very slightly (from 4.75 to 6.5 µg/L), slightly exceeding the criteria.

5.3 Former Building TR-1 Area

Three wells in the former Building TR-1 area were sampled (MW-23, MW-26, and MW-38), along with perimeter monitoring wells MW-19 and MW-71. The samples were analyzed for VOCs and MW-19, MW-23, MW-26, and MW-38 were analyzed for PCBs.

- PCBs have historically been detected in wells MW-23, MW-26, and MW-38. No PCBs were detected in these wells in October 2018.
- Monitoring well MW-23 is located off the west-northwest side of the area and has historically contained elevated levels of VOCs. VOC results from the October 2018 sampling event were consistent, albeit somewhat lower than the results from November 2017. The highest concentrations of benzene, chloroethane, 1,1,1-TCA, 1,1-DCA, ethylbenzene, toluene, and xylene detected during the October 2018 sampling event occurred at this well. However, perimeter monitoring well MW-19, located approximately 60 ft to the northwest and downgradient of MW-23, exhibited no exceedances of groundwater criteria.
- Monitoring well MW-26 is located in the west-central area of former Building TR-1 where elevated VOCs were previously detected. TCE was the only VOC detected in October 2018 at a concentration above the groundwater criteria (9 µg/L). This was consistent with the November 2017 event when TCE, at 8.17 µg/L, was the only VOC detected at a concentration above the criteria.
- Monitoring well MW-38 is located on the northwest, downgradient side of former Building TR-1. The October 2018 results show that cis-1,2-DCE and TCE were detected at concentrations slightly above their respective groundwater criteria. These results were consistent with the November 2017 sampling event.

5.4 Former Building TR-3/SWTP Area and Parking Lot R

In 2016, a sheet pile wall was installed on the north side of former Building TR-3 to contain known concentrations of VOCs in groundwater beneath the former building footprint. A horizontal well was also installed upgradient of the

sheet pile wall to capture impacted groundwater. The groundwater is treated at the adjacent SWTP, which is located in the northeast corner of former Building TR-3.

Historically, the area of highest VOC concentrations has been reported in monitoring wells located west of the SWTP.

Nine monitoring wells in the former Building TR-3/SWTP area were analyzed for VOCs (MW-18, MW-44, MW-45, MW-48, MW-50, MW-57, MW-58, MW-66, and TR3-PW-01). One of those wells (MW-44) was also analyzed for PCBs. Also, two perimeter wells, MW-79 and TR3-MW-02, are also being used to evaluate groundwater quality in the former Building TR-3/SWTP area.

Monitoring well MW-18 is located on the north side of the SWTP, just south (upgradient) of the sheet pile wall. Groundwater analytical data dating back to 2001 for MW-18 show considerable fluctuations in VOC concentrations with TCE and cis-1,2-DCE typically having the highest concentrations. The TCE and cis-1,2-DCE concentrations in October 2018 were higher than those measured in 2017, but were within the historical range of detections. See **Appendix D** for historic sampling results. The increase of VOC concentrations in MW-18 is likely attributable to the installation of the sheet pile wall and subsequent groundwater pumping in the area.

TR3-PW-01 is located approximately 150 ft west of MW-18 and is also just south of the sheet pile wall. TR3-PW-01 was sampled following its installation in 2016 (prior to installation of the sheet pile wall) and contained TCE at a concentration of 195,000 µg/L. The TCE concentration has since dropped to 137,000 µg/L in November 2017 and to 94,500 µg/L in October 2018. While these concentrations are approximately 8 to 20% of the solubility limit of TCE and suggest that free-phase TCE maybe bound within the fine grained soil near this location, the decreasing trend in concentrations may reflect the active capture of impacted groundwater by the horizontal well and sheet pile wall.

Wells MW-50 and MW-57 are located farther west of TR3-PW-01, south of the sheet pile wall. The 2018 results from these wells again showed limited impacts. MW-50 reported no detectable VOCs. MW-57 reported cis-1,2-DCE,(164 µg/L) and VC (115 µg/L) above the groundwater criteria and slightly higher than measured in 2017. These results are consistent with the past and suggest no material change in the conditions near these wells.

Wells MW-58 and MW-66 are located north (downgradient) of the sheet pile wall but south of Sanders Creek. These wells have limited sampling history, having only been sampled in 2014, 2015, and 2017. However, in 2017, the first sampling event following the installation of the sheet pile wall and horizontal well, TCE decreased by an order of magnitude in MW-58 and decreased to below the groundwater criteria at MW-66. In October 2018 TCE decreased below the groundwater criteria in MW-58 and was present at 16.1 µg/L in well MW-66. The 2017 and 2018 results show that the elevated VOC concentrations detected south (upgradient) of the sheet pile wall are not observed on the north (downgradient) side of the wall. These results suggest the sheet pile wall and horizontal well are operating as designed and are maintaining hydraulic containment of the TCE impacted groundwater.

No VOCs were detected at concentrations exceeding criteria in the downgradient perimeter wells (MW-79 and TR3-MW-02) located north of Sanders Creek.

Monitoring wells MW-44 and MW-45 are located south (upgradient) of the sheet pile wall in an area within the footprint of former Building TR-3 and currently referred to as Parking Lot R. These wells were previously sampled in 2013, 2014, 2015, and 2017. During those sampling events, both wells contained TCE at concentrations above the groundwater criteria with the exception of MW-44 where TCE was detected slightly below the criteria at 4.99 µg/L. In addition, MW-45 contained cis-1,2-DCE at concentrations above the criteria in three of the four events. In October 2018, TCE again exceeded the groundwater criteria in both wells and cis-1,2-DCE exceeded the groundwater criteria in MW-45. Overall, concentrations in both wells were generally consistent with the historical results. PCBs, which had been detected once in MW-44 (0.61 µg/L in 2014), were not detected in October 2018.

Monitoring well MW-48 is located on the south side of the SWTP in an area where elevated VOCs have historically been detected. VOCs were significantly lower during the November 2017 and October 2018 events when compared to the historical data. For example, TCE concentrations were 690-, 500-, 97-, 10.7-, and 16.1-µg/L in 2013, 2014, 2015, 2017, and 2018, respectively.

5.5 SWMUs 1 through 4

Two monitoring wells, MW-03S and MW-03D, are located in this former SWMU area south of Building TR-18S. Groundwater sampling of these two wells dates back to 1985. The highest VOC concentrations are detected at MW-03S where cis-1,2-DCE is the primary compound reported. The historic high cis-1,2-DCE concentration of 32,000 µg/L was detected in 1990. Cis-1,2-DCE has decreased since that time with concentrations ranging between 390 to 729 µg/L from 2014 to 2017. In 2018 the cis-1,2-DCE concentration was 863 µg/L. The October 2018 detections of 1,1-DCA and VC were generally consistent with the 2014, 2015, and 2017 results. The detection of cis-1,2-DCE, at 7 µg/L, in MW-03D was consistent with the historical results.

5.6 Miscellaneous Interior Wells

Monitoring wells MW-69, MW-70, MW-75, and MW-84 were installed in 2017 to provide groundwater quality data for locations within the interior of the Site and were selected for inclusion in the Annual SWGMP.

- Monitoring well MW-69 is located between buildings TR-4 and TR-6. The VOCs 1,1-DCA, cis-1,2-DCE, trans-1,2-DCE, TCE, and VC were detected at concentrations exceeding groundwater standards in samples collected in February and November 2017. The October 2018 results were slightly higher than November 2017 concentrations but lower than the February 2017 data (e.g., TCE was 3,170-, 1,060-, and 2,480-µg/L in February 2017, November 2017, and October 2018, respectively).
- Monitoring well MW-70 is located within the footprint of former Building TR-2. No compounds were detected at concentrations exceeding groundwater criteria during the February 2017, November 2017, or October 2018 sampling events.
- Monitoring well MW-75 is located between buildings TR-5 and TR-19. No compounds were detected at concentrations exceeding groundwater criteria during the February 2017, November 2017, or October 2018 sampling events.
- Monitoring well MW-84 is located between buildings TR-4 and TR-5. Following well installation, TCE was detected at a concentration of 46.4 µg/L in February 2017. The TCE concentration then decreased 8.26 µg/L in November 2017 and was not detected in the well in October 2018.

5.7 Emerging Contaminants

Detections of the emerging contaminants were limited and below EPA drinking water health advisory level for PFOA and PFOS. PFOA and PFOS were detected at the upgradient property well (DP-MW-04) as well as the downgradient wells. Detections of 1,4-dioxane were consistent with historical data at MW-70 and MW-71.

6. Summary and Recommendations

Monitoring and sampling was performed in October 2018 in accordance with the Annual SWGMP. Necessary well repairs noted in 2017 and during this year's inspection were completed in October and November 2018. A location and elevation survey was conducted for any repaired wells and for the B-series piezometers located along and near Telergy Parkway.

Wells/piezometers AR-SB-04, B001-08, B001-14, FDPZ02, FDPZ04, MW-11, MW-20, MW-53, MW-59, and SSIPZ05 could not be found for the second consecutive year. With the exception MW-11 and MW-59 which are beneath a temporary access road installed for the TR-3 North Wall sheet pile installation project, all these wells were likely destroyed by paving or landscaping at the site. All wells with the exception of AR-SB-04, B001-08, MW-20, and SSIPZ05 are currently not part of the Annual SWGMP. These four wells were scheduled for water level measurements; however, there are sufficient nearby wells that are currently part of the Annual SWGMP for water level measurements which provides adequate coverage.

As required by the remedial goals and criteria for groundwater presented in the CO, the October 2018 groundwater analytical data identifies locations that are within compliance with applicable TOGS. For locations with groundwater exceedances, the analytical data are consistent with or lower than historical results. The data, specifically DO and ORP, show that groundwater conditions are favorable for reductive dechlorination in some of the areas (e.g., MW-18, MW-23, and TR3-PW-01) with elevated VOC contamination. The presence of TCE breakdown products across the well network also supports this conclusion.

The decrease of concentrations, when compared to historical results, in wells directly downgradient of the sheet pile wall (MW-58 and MW-66) along with the groundwater depression directly upgradient of the wall, shows that the sheet pile wall and horizontal well are effective in containing and capturing known VOC-contaminated groundwater.

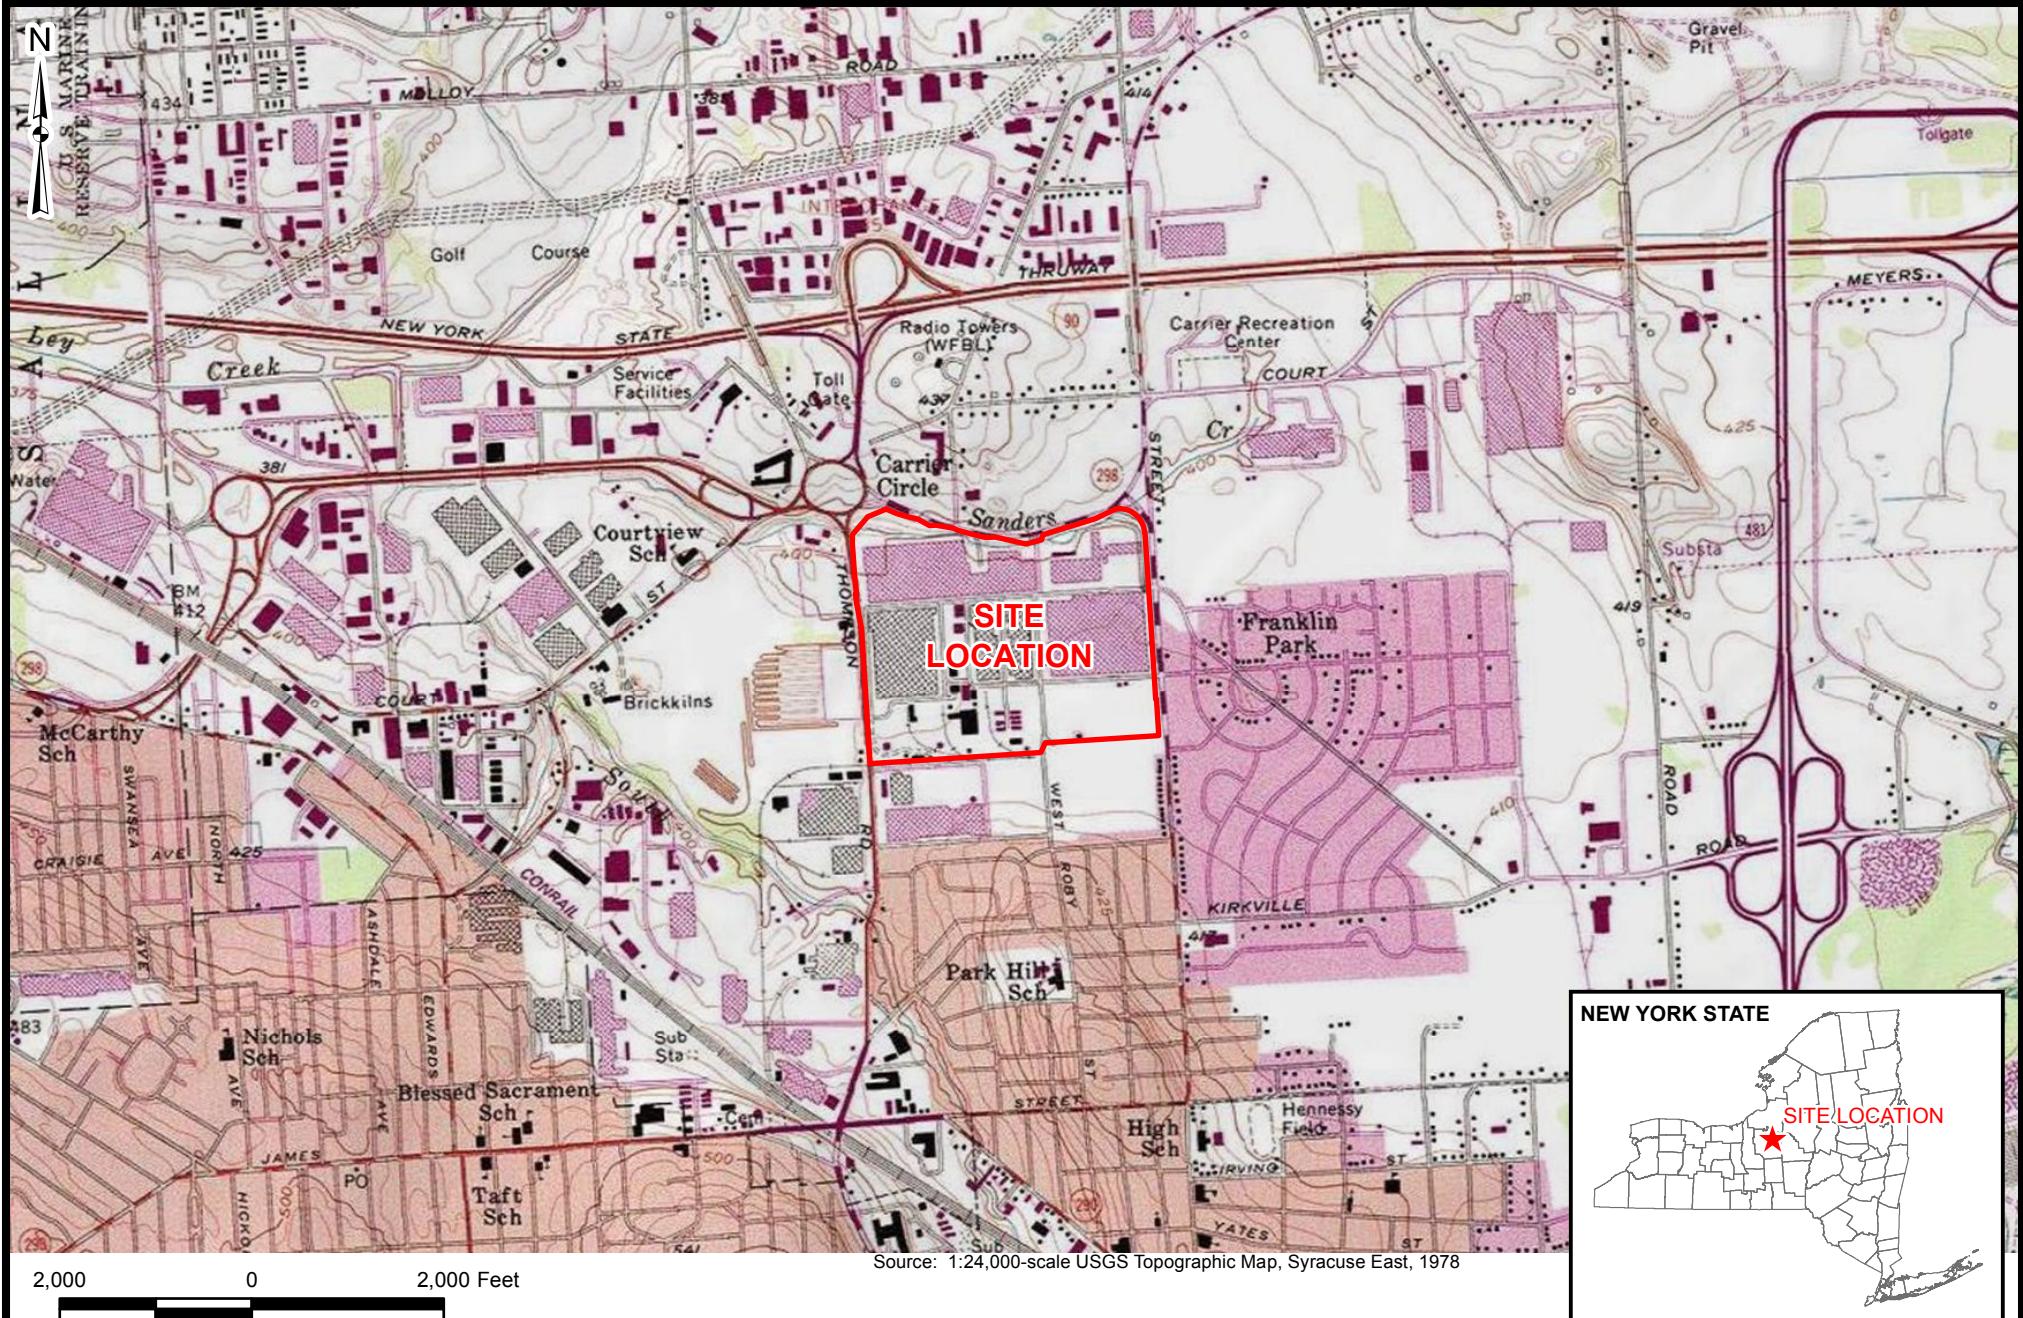

Contaminant concentrations observed at MW-23 are consistent with concentrations observed in 2017. Contaminant concentrations were not observed at MW-19 which is a nearby on-Site well downgradient of MW-23, which strongly suggests that contaminants detected in MW-23 are not migrating off-Site. To further evaluate the contaminant concentrations in MW-23, the 2018 sample purge log was reviewed and found to exhibit evidence of strongly reducing conditions (low DO and ORP) and very low permeability (over 6.5 feet of drawdown when purging at only 120 to 150 milliliters per minute). Under these conditions, small residual concentrations of contaminants can persist and result in detections of degradation byproducts from reductive dechlorination within the isolated environment in and adjacent to the well. The 2018 data shows that at this well, cis-1,2-DCE, a degradation byproduct of TCE, had a concentration more than ten times that of TCE. The ratio of cis-1,2-DCE to TCE suggest that biodegradation is occurring at this location.

With the potential exception of well MW-71, the groundwater data demonstrate that contaminants are not migrating off-Site. However, installation of a new monitoring well downgradient of MW-71 will be installed consistent with methods/procedures used in the installation of MW-71. A brief letter work plan will be provided to NYSDEC prior to installation. The DO in this well shows groundwater conditions are favorable for reductive dechlorination and TCE breakdown product (cis-1-2-DCE and VC) are present in MW-71. The area directly off-Site is Thompson Road and beyond that is Carrier-owned property. Monitoring at MW-71 will continue as part of the Annual SWGMP.

The emerging contaminants were detected in four of the 10 wells for 1,4-dioxane and five of the 10 wells for PFAS. It is noteworthy that PFAS was detected in one of the Site up-gradient wells (DP-MW-04). Given that all the detected PFOA and PFOS concentrations are well below the EPA drinking water health advisory level and no portable wells are on-Site or in the vicinity of the Site, no further sampling for PFAS is recommended. 1,4-dioxane has been sampled for at the Site historically and will continue at the selected 10 wells with the lower method detection limit.

The next Annual SWGMP event is tentatively scheduled for September 2019.

I. INTRODUCTION

This Data Usability Summary Report (DUSR) has been prepared following the guidelines provided in New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation *DER-10 Technical Guidance for Site Investigation and Remediation*, Appendix 2B - *Guidance for Data Deliverables and the Development of Data Usability Summary Reports*, May 2010.

II. ANALYTICAL METHODOLOGIES AND DATA VALIDATION PROCEDURES

The data being evaluated is from the October 15-19, 2018 sampling of 33 groundwater (GW) samples, 3 field duplicate (FD), 2 matrix spike/matrix spike duplicates (MS/MSDs), 2 equipment/field rinse blanks (EB/FB), and 2 trip blanks. The analytical laboratory that performed the analyses is Eurofins Spectrum Analytical Laboratories, LLC located in Agawam, MA and Lancaster Laboratories located in Lancaster, PA. Volatile Organic Compound (VOCs) analysis were subcontracted to SGS-Accutest located in Dayton, NJ. The analysis for 1,4-dioxane by 8270D SIM was subcontracted to Pace Laboratories located in Mount Juliet, TN. The samples were analyzed for the following parameters. Not all samples were analyzed for all parameters.

Matrix	Parameter	Method
Groundwater	Volatile Organic Compounds (VOC)	SW8260C
	Polychlorinated Biphenyls (PCBs) (Total and Dissolved)	SW8082A
	1,4-Dioxane	SW8270D SIM
	Per- and Polyfluoroalkyl Substances (PFAS)	Method 537-Modified

A limited data validation was performed following the guidelines in the following USEPA Region II document (where applicable) along with the method and laboratory SOPs for PFAS:

- *Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry*,
SW-846 Method 8260B & 8260C, SOP HW-24, Rev. 4, October 2014;

- *Validating Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry, SW-846 Method 8270D, SOP HW-22, Rev. 5, December 2010; and*
- *Polychlorinated Biphenyl (PCB) Aroclor Data Validation, SOP HW-37A, Rev. 0, February 2018.*

Qualifications applied to the data during the limited data validation include ‘R’ (rejected), ‘J’ (estimated concentration), and ‘UJ’ (estimated quantitation limit). Definitions of USEPA data qualifiers are presented at the end of this text. The validated analytical results are presented on Tables 1 – 2. Copies of marked-up laboratory analytical summaries (Form 1s) are presented in Attachment A on a per sample delivery group (SDG) basis. Documentation supporting the qualification of data is presented in Attachment B on a per sample delivery group basis. Only analytical deviations affecting data usability are discussed in this report.

III. DATA DELIVERABLE COMPLETENESS

Full deliverable data packages (i.e., NYSDEC Category B or equivalent) were provided by the laboratory, which included all reporting forms and raw data necessary to fully evaluate and verify the reported analytical results.

IV. SAMPLE RECEIPT/PRESERVATION/HOLDING TIMES

All samples were received by the laboratory intact, properly preserved and under proper chain-of-custody. All samples were analyzed within the required holding times.

V. NON-CONFORMANCES

- **Surrogates**

The percent recoveries (%R) of PFAS surrogates 13C3-perfluorobutanesulfonate (PFBS) and/or 13C5-perfluoropentanoic acid (PFPA) were greater than the upper QC limit in GW samples DP-MW-04 and MW-14. These samples were re-extracted and showed similar QC outliers. The detected results for PFBS and PFPA in these samples have been qualified ‘J’.

Support documentation (i.e., surrogate recovery summary form) is presented in Appendix B.

- **Instrument Calibration**

The relative response factors (RRF) for acetone in the VOC initial calibration (ICAL) and continuing calibration standards (CCAL) were less than the QC limit of 0.100. The non-detect

results for this compound in the associated samples, as listed on the instrument performance check forms, were qualified 'R' and the detected results were qualified 'J'.

The percent difference (%D) between the ICAL average RRF and the RRF in one or more of the CCALs associated with the GW and field QC samples exceeded the QC limit of 20% for one or more of the following VOCs: bromomethane, dichlorodifluoromethane, and/or trichlorofluoromethane. The results for these compounds in the associated samples, as listed on the instrument performance check forms, were qualified 'UJ'.

Support documentation (i.e., instrument performance check form, continuing calibration summary form) is provided in Attachment B.

- **Internal Standards**

The %Rs of PFAS internal standard (IS) ¹³C3-perfluorobutanoic acid (PFBA) was less than the QC limit in the analysis of GW samples AR-MW-02, DP-MW-04, MW-03S, FD-101618 (MW-03S), and MW-14. The samples were re-analyzed with similar QC outliers. The results for PFBA in these sample have been qualified 'J'.

Support documentation (i.e., IS summary form) is provided in Attachment B.

- **Field Duplicates**

Good field and analytical precision is defined as the following:

1. If both the sample and field duplicate (FD) results are greater than 2x the reporting limit (RL), the relative percent difference (RPD) between the two results must be less than 50%.
2. If both the sample and FD results are less than 2x the RL, the absolute difference between the two results must be less than the RL.

Results not meeting the criteria above resulted in both the sample and field duplicate being qualified 'J' or 'UJ'.

Field duplicates were collected at the following sample locations and exhibited good field and analytical precision with any exceptions noted below:

Parent Sample ID	Field Duplicate ID	Parameters Qualified 'J' or 'UJ'
GROUNDWATERS		
MW-44	FD-101818	---
MW-84	FD-101518	---
MW-03S	FD-101618	---

VI. SAMPLE RESULTS AND REPORTING

All quantitation/detection limits were reported in accordance with method requirements and were adjusted for sample volume, and dilution factors. Results below the quantitation limits were qualified 'J' by the laboratory. All quantitation limits were reported in accordance with method requirements and were adjusted for dilution factors.

Several samples for VOCs were analyzed utilizing dilutions due to sample matrix. The detection limits for the non-detect compounds represent the lowest achievable at the dilution used during the analysis.

The VOC analysis for the GW and field QC samples (all aqueous matrices) were subcontracted to SGS-Accutest due to a temporary loss of NYSDOH ELAP certification by Eurofins. The list of VOCs reported by SGS differs slightly than those reported by Eurofins.

VII. SUMMARY

All sample analyses were found to be compliant with the method and validation criteria, except where previously noted. Those results qualified 'R' are considered unusable. Those results qualified 'J' and 'UJ' are considered conditionally usable. All other sample results are usable as reported. AECOM does not recommend the recollection of any samples currently.

DEFINITIONS OF USEPA DATA QUALIFIERS

- U – The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- (J+) - The result is an estimated quantity. The associated numerical value is biased high.
- (J-) - The result is an estimated quantity. The associated numerical value is biased low.
- UJ – The analyte was analyzed for, but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- R – The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.
- D – The sample result was reported from a secondary dilution analysis.
- NJ – The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

Z=The response for a target analyte(s) in the opening continuing calibration verification standard is outside the QC acceptance limits. Since the response is high indicating increased sensitivity, and the target analyte(s) is not detected in the sample, the data is reported.

The recovery for labeled compound used as extraction standards is outside of QC acceptance limits as noted on the QC Summary.

The sample injection internal standard peak areas were outside of the QC limits for both the initial injection and the re-injection. The values here are from the initial injection of the sample.

Z=The response for a target analyte(s) in the opening continuing calibration verification standard is outside the QC acceptance limits. Since the response is high indicating increased sensitivity, and the target analyte(s) is not detected in the sample, the data is reported.

The recovery for the sample injection standard and the labeled compound used as extraction standards is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken: The sample was reextracted within holding time and internal standard(s) and extraction standards were again outside the QC acceptance limits. The data is reported from the original extraction. Both sets of data are included in the data package.

SAMPLE RECEIPT:

Samples were received in good condition and within temperature requirements.

HOLDING TIME:

All holding times were met.

PREPARATION/EXTRACTION/DIGESTION:

No problems were encountered.

CALIBRATION/STANDARDIZATION:

(Sample number(s): 9860648-9860654: Analysis: 14473)
The response for a target analyte(s) in the opening continuing calibration verification standard is outside the QC acceptance limits. Since the response is high indicating increased sensitivity, and the target analyte(s) is not detected in the sample, the data is reported.

Please send notice within 24 hours of obtaining valid data, of the results of all drinking water samples that exceed any EPA or Department-established maximum contaminant level, maximum residual disinfectant level or reportable concentration. Notice should be emailed to SpectrumLabResults@EurofinsUS.com.

Please notify SpectrumLabResults@EurofinsUS.com immediately and prior to conducting analysis if certification is not held for the analyses requested.

Please e-mail results in electronic format to SpectrumLabResults@EurofinsUS.com.

Case Narrative/Conformance Summary

CLIENT: Eurofins Spectrum Analytical
SDG: SAJ23

PFAS Group

Fraction: PFAS by LC/MS/MS

QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

Surrogate

Surrogate recoveries that are noncompliant are confirmed unless attributed to a dilution or otherwise noted.

(Sample number(s): 9860648, 9860649: Analysis: 14473)

The recovery for labeled compound used as extraction standards is outside of QC acceptance limits as noted on the QC Summary due to the matrix of the sample.

(Sample number(s): 9860654, 9860656: Analysis: 14473)

The recovery for labeled compound used as extraction standards is outside of QC acceptance limits as noted on the QC Summary.

Batch#: 18295007 (Sample number(s): 9860648-9860657, UNSPK: 9860650)

The recovery(ies) for the following surrogate(s) exceeded the acceptance window: 13C2-6:2-FTS (9860653), 13C2-8:2-FTS (9860653), 13C3-PFBS (9860648, 9860649, 9860653, 9860654, 9860656), 13C5-PFPeA (9860653)

Batch#: 18297010 (Sample number(s): 9860658)

The recovery(ies) for the following surrogate(s) exceeded the acceptance window: d3-NMeFOSAA (LCS297010Q, LCSDAY)

SAMPLE ANALYSIS:

(Sample number(s): 9860649, 9860654: Analysis: 14473): Analysis: 14473)

The sample injection internal standard peak areas were outside of the QC limits for both the initial injection and the re-injection. The values here are from the initial injection of the sample.

(Sample number(s): 9860653: Analysis: 14473)

The recovery for the sample injection standard and the labeled compound used as extraction standards is outside the QC acceptance limits as noted on the QC Summary. The following corrective action was taken: The sample was reextracted within holding time and internal standard(s) and extraction standards were again outside the QC acceptance limits. The data is reported from the original extraction. Both sets of data are included in the data package.

Please send notice within 24 hours of obtaining valid data of the results of all drinking water samples that exceed any EPA or Department-established maximum contaminant level, maximum residual disinfectant level or reportable concentration. Notice should be emailed to SpectrumLabResults@EurofinsUS.com.

Please notify SpectrumLabResults@EurofinsUS.com immediately and prior to conducting analysis if certification is not held for the analyses requested.

Please e-mail results in electronic format to SpectrumLabResults@EurofinsUS.com.

SDGSC51255

SC51255 General Narrative

Eurofins Spectrum Analytical, Inc. submits the enclosed data package for the site characterization of UTC/Carrier 2018 GW Event. Samples submitted for analysis by AECOM Environment - Buffalo, NY. Under this deliverable, analysis results are presented for three Water Field QC samples and twenty three Ground Water samples submitted on October 18th, 2018. Data has been reported to the MRL. The report includes estimated concentrations detected below the RDL and above the MDL (J-Flag).

The analyses were performed according to USEPA SW846 method analytical guidelines and other methods. In addition the analyses were performed according to criteria dictated by National Environmental Laboratory Accreditation Conference (NELAC) and in accordance with project contract requirements and chain of custody forms.

Observations and/or deviations observed for specific analyses can be found in the analysis narrative:

1. Overall Observations:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual Integrations are coded to provide the data reviewer justification for such action. The codes are labeled on corresponding raw data for GC/MS and GC analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or failing baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Scanned copies of logbook pages are included, with the originals are archived within the laboratory.

The pages in this report have been numbered consecutively, starting with the general narrative and ending with the page labeled as "Last Page of data Report".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this electronic data package, has been authorized by the laboratory director as verified by the following signature.

Dawn E. Wojcik

Laboratory Director

Date: 12/31/2018

CASE NARRATIVE / CONFORMANCE SUMMARY

2

Client: Eurofins Spectrum Analytical, Inc.

Job No JC76441

Site: UTC Carrier AOC G SRI

Report Date 11/1/2018 2:53:54 PM

On 10/23/2018, 22 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 3.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC76441 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method SW846 8260C

Matrix: AQ	Batch ID: V2E6496

- All method blanks for this batch meet method specific criteria.

Matrix: AQ

Batch ID: VA9390

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC76274-9MS, JC76274-9MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC76441-9: Diluted due to high concentration of target compound.
- JC76441-8: Diluted due to high concentration of target compound.
- JC76441-8 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JC76441-9 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.
- JC76441-6 for Dichlorodifluoromethane: Associated CCV outside of control limits high, sample was ND.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No. SC51255

Client: AECOM Environment - Buffalo, NY

Project: UTC/Carrier 2018 GW Event / 60589143

SDG #: SC51255

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to SW846 8082A.

IV. PREPARATION

Aqueous samples were prepared according to SW846 3510C.

V. INSTRUMENTATION

The following equipment was used to analyze SW846 8082A:

HPS11 details: Agilent 6890 series dual column ECD GC with RTX-CLPesticides (30m, 0.53mmID, 0.5um df) and DB-5MS column ((30m, 0.53mmID 1.50 df)

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria.

C. Surrogates:

All method criteria were met with the following exceptions:

4,4-DB-Octafluorobiphenyl (Sr) in batch 1813950, samples MW-23 (SC51255-22), MW-23-F (SC51255-23): Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate.

D. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

A matrix spike and a matrix spike duplicate were analyzed:

In batch 1813950 from source sample MW-19-F (SC51255-25).

In batch 1813950 from source sample MW-19 (SC51255-24).

All method criteria were met.

E. Duplicates:

No client requested duplicate. However, the method criteria may have been fulfilled with non-SDG source samples.

F. Internal Standards:

Internal standards were within the acceptance criteria.

G. Samples:

All method criteria were met.

DELIVERY SERVICE: Fei L F AIRBILL NO.:

SC51286 General Narrative

Eurofins Spectrum Analytical, Inc. submits the enclosed data package for the site characterization of UTC/Carrier 2018 GW Event. Samples submitted for analysis by AECOM Environment - Buffalo, NY. Under this deliverable, analysis results are presented for three Water Field QC samples and seventeen Ground Water samples submitted on October 20th, 2018. Data has been reported to the MRL. The report includes estimated concentrations detected below the RDL and above the MDL (J-Flag).

The analyses were performed according to USEPA SW846 method analytical guidelines and other methods. In addition the analyses were performed according to criteria dictated by National Environmental Laboratory Accreditation Conference (NELAC) and in accordance with project contract requirements and chain of custody forms.

Observations and/or deviations observed for specific analyses can be found in the analysis narrative:

1. Overall Observations:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual Integrations are coded to provide the data reviewer justification for such action. The codes are labeled on corresponding raw data for GC/MS and GC analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or failing baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Scanned copies of logbook pages are included, with the originals are archived within the laboratory.

The pages in this report have been numbered consecutively, starting with the general narrative and ending with the page labeled as "Last Page of data Report".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this electronic data package, has been authorized by the laboratory director as verified by the following signature.

Dawn E. Wojcik

Laboratory Director

Client: Eurofins Spectrum Analytical, Inc.

Job No JC76439

Site: UTC Carrier AOC G SRI

Report Date 11/2/2018 2:47:46 PM

On 10/23/2018, 15 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 3.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC76439 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method SW846 8260C

Matrix: AQ

Batch ID: V4D3974

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC76439-8MS, JC76439-8MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix: AQ

Batch ID: V4D3977

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC76467-2MS, JC76467-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC76439-12: Diluted due to high concentration of target compound.
- JC76439-13: Diluted due to high concentration of target compound.
- JC76439-12 for Bromomethane: Associated CCV outside of control limits low.
- JC76439-13 for Bromomethane: Associated CCV outside of control limits low.
- JC76439-5 for Bromomethane: Associated CCV outside of control limits low.
- JC76439-14 for Bromomethane: Associated CCV outside of control limits low.
- JC76439-8 for Bromomethane: Associated CCV outside of control limits low.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

Please send notice within 24 hours of obtaining valid data, of the results of all drinking water samples that exceed any EPA or Department-established maximum contaminant level, maximum residual disinfectant level or reportable concentration. Notice should be emailed to SpectrumLabResults@EurofinsUS.com.

Please notify SpectrumLabResults@EurofinsUS.com immediately and prior to conducting analysis if certification is not held for the analyses requested.

Please e-mail results in electronic format to SpectrumLabResults@EurofinsUS.com.

CASE NARRATIVE

ONE LAB. NATIONWIDE.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No. SC51286

Client: AECOM Environment - Buffalo, NY

Project: UTC/Carrier 2018 GW Event / 60589143

SDG #: SC51286

I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

II. HOLDING TIMES

All samples were prepared and analyzed within the method-specific holding time.

III. METHODS

Analyses were performed according to SW846 8082A.

IV. PREPARATION

Aqueous samples were prepared according to SW846 3510C.

V. INSTRUMENTATION

The following equipment was used to analyze SW846 8082A:

HPS11 details: Agilent 6890 series dual column ECD GC with RTX-CLPesticides (30m, 0.53mmID, 0.5um df) and DB-5MS column ((30m, 0.53mmID 1.50 df)

VI. ANALYSIS

A. Calibration:

All quality control samples were within the acceptance criteria.

B. Blanks:

All blanks were within the acceptance criteria.

C. Surrogates:

All method criteria were met.

D. Spikes:

1. Laboratory Control Samples (LCS):

All method criteria were met.

2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):

No matrix spike or matrix spike duplicates were analyzed.

E. Duplicates:

No client requested duplicate. However, the method criteria may have been fulfilled with non-SDG source samples.

F. Internal Standards:

Internal standards were within the acceptance criteria.

G. Samples:

All method criteria were met with the following exceptions:

November 9, 2018 Report Revision Case Narrative:

This report has been revised to correct project name per client request.

SAMPLE RECEIPT:

Samples were received in good condition and within temperature requirements.

HOLDING TIME:

All holding times were met.

PREPARATION/EXTRACTION/DIGESTION:

No problems were encountered.

CALIBRATION/STANDARDIZATION:

All criteria were met.

QUALITY CONTROL AND NONCONFORMANCE SUMMARY:

MS/MSD

Matrix QC may not be included if site-specific QC were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, laboratory spike data (LCS) are provided.

Surrogate

Surrogate recoveries that are noncompliant are confirmed unless attributed to a dilution or otherwise noted.

Batch#: 18298005 (Sample number(s): 9866029-9866032)

The recovery(ies) for the following surrogate(s) exceeded the acceptance window: 13C3-PFBS (9866032), 13C5-PFPeA (9866032)

Case Narrative/Conformance Summary

CLIENT: Eurofins Spectrum Analytical
SDG: SAJ38

PFAS Group

Fraction: PFAS by LC/MS/MS

(Sample number(s): 9866029: Analysis: 14473)

The injection standard peak areas were outside of the QC limits for both the initial injection and the re-injection. The values here are from the initial injection of the sample.

(Sample number(s): 9866032: Analysis: 14473)

The recovery for several labeled compounds used as extraction standards are outside of QC acceptance limits as noted on the QC Summary.

SAMPLE ANALYSIS:

No problems were encountered with the analysis of the samples.

APPENDIX C
EDR Radius Map™ Water Well Search

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information								
	Boundary			Classification			Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil			
2	11 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6	
3	38 inches	59 inches	stratified silt loam to loamy very fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6	

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

G — New York State Guidance Value

ND — Not detected above method detection limits

NA — Not Analyzed

NS — Not Sampled as part of the Site-Wide Monitoring Plan

mg/L — milligrams per liter

$\mu\text{g/L}$ — micrograms per liter

Detections highlighted in **BOLD**

J value indicates concentration is est.

S value indicates concentration is estimated and *a* indicates diluted sample results.

a indicates diluted sample results.
E indicates concentration exceeds

* denotes that well has been abandoned

- denotes that well has been abandoned

Groundwater Analytical Results - Detections Only (October 2013 to June 2015)
at Select Non-CO Locations
Carrier Corporation Thompson Road Facility
Syracuse, New York

µg/L = micrograms per liter.

U = Non-detect. If highlighted, detection limit exceeds screening limit.

NA = Sample not analyzed for analyte.

Bold = Concentration is greater than method detection limit.

a = Concentration exceeds December 2006 NYSDEC 6 NYCRR Part 703 Surface Water and Groundwater Quality Standards and Groundwater Effluent Limitations.

Highlighted cell indicates exceedance of standard.

J = Result is less than the method reporting limit but greater than method detection limit.

B = Analyte was detected in both the sample and the blank sample.
